

# HEALTH, SAFETY, ENVIRONMENTAL AND REMEDIATION SITE OPERATIONS REPORT

## Williams AFB ST012

Site No.: 9101-11-0001

### Period Between 18 March and 31 March 2017

#### I. SITE SUBCONTRACTOR SUMMARY

##### A. Week Ending 24 March 2017

Company	Sat	Sun	Mon	Tue	Wed	Thu	Fri
Amec Foster Wheeler			X	X	X	X	X
TerraTherm							
MP Environmental							
Yellow Jacket							

##### B. Week Ending 31 March 2017

Company	Sat	Sun	Mon	Tue	Wed	Thu	Fri
Amec Foster Wheeler			X	X	X	X	X
TerraTherm			X	X	X	X	X
MP Environmental							
Yellow Jacket							

#### II. SCHEDULE / SITE ACTIVITIES REVIEW

##### A. SEE Decommissioning

- TerraTherm onsite to disassemble and remove equipment including air strippers (2), air compressor, pumps and equipment skids, cooling towers, miscellaneous piping, thermal accelerator blower,

**B. EBR Construction - None**

**C. Containment System Construction - None**

**D. Containment System Operation - None**

**E. Sampling/Monitoring**

- SEE/EBR well LNAPL monitoring/removal

**F. SVE System Operation/Optimization**

- Routine operation
- Operated the thermal oxidizer and flame-oxidizer in parallel on the SVE system.
  1. The thermal oxidizer was shut down for routine maintenance on 29 March 2017. The thermal oxidizer was restarted successfully upon the completion of the maintenance activities.

### III. SVE OPERATING DATA

#### A. Thermal Oxidizer Destruction Efficiency/Mass Removal Summary

The destruction efficiency and mass removal calculations for the thermal oxidizer are tabulated below. A correction factor was applied to PID readings based on available analytical data and corresponding PID data. This factor is updated each time new analytical data is available and may retroactively alter previously reported data.

Date Period Began	Date Period Ended	Days in Period	Influent Source	Time Thermal Oxidizer Operated	Thermal Oxidizer Uptime	Influent Concentration (PID)	Influent Concentration (Adjusted PID) <sup>(c)</sup>	Effluent Concentration (PID)	Effluent Concentration (Adjusted PID) <sup>(c)</sup>	Calculated Destruction Efficiency <sup>(a)</sup>	Flowrate into Oxidizer (End of Period) <sup>(e)</sup>	Estimated VOC Mass Removed <sup>(b)</sup>	Average Daily Removal Rate <sup>(b)</sup>	Estimated VOC Mass Released to Atmosphere <sup>(b)</sup>	Average VOC Mass Released to Atmosphere <sup>(b)</sup>

Notes:

- % - percent
- hrs - hours
- JP-4 - jet petroleum fuel grade four
- lbs - pounds
- mg/m<sup>3</sup> - milligrams per cubic meter
- ppmv - parts per million by volume
- scfm - standard cubic feet per minute
- TPH - total petroleum hydrocarbons
- PID - photoionization detector
- SVE - soil vapor compound
- VOC - volatile organic compound
- ACE - active containment extraction system

\* Concentration and associated calculated values may change after receipt of subsequent analytical data.

- (a) Calculated destruction efficiencies are calculated using a single sampling event for each week, not using the average influent and effluent results.
- (b) Mass and volumes are calculated based on laboratory data for TPH reported as JP-4. As has been the basis for previous calculations at ST012, the average molecular weight of TPH as JP-4 is assumed equivalent to xylene (106.168 grams per mole). The assumed liquid density of the fuel is 6.57 lbs per gallon.
- (c) The influent PID correction factor calculation has been revised to reflect a three-value rolling average (the average of the correction factor for the analytical sample collected one event prior, the current event, and one event after). The correction factor for 11 March 2016 has been removed as anomalous during the post-steam operation period based on the subsequent six months of correction factors calculated. The average for the 07 April through 21 April 2016 period incorporates only 25 April and 23 May 2016 correction factors.
- (d) To address inconsistencies in influent PID and flow rate measurements, system piping was changed on 13 October 2016. Flow rate measurements prior to this date are reported in acfm, and after this date are reported in scfm.
- (e) An incorrect correction factor was used to calculate the Effluent Concentration (Adjusted PID) for the period between 24 June and 8 September 2016. The value has been corrected for that period.
- (f) The effluent PID correction factor for the 15 September 2016 sample was anomalous compared to historical values. An average of correction factors from samples before and after this date was used.
- (g) During the week of 20 January, the thermal oxidizer was operated on both the SVE and for commissioning the ACE systems. Operating records do not contain enough detail to accurately allocate mass removal between these two sources.
- (h) The influent lab sample collected on 11 November 2016 was determined to be anomalous and was removed. A two point average was used between 27 October and 01 December 2016.
- (i) The influent valve to receive active containment system air stripper influent was discovered open after PID monitoring for the week of 02 March 2017, providing unexpected dilution air in the thermal oxidizer influent.

### B. Flame Oxidizer Destruction Efficiency/Mass Removal Summary

The destruction efficiency and mass removal calculations for the flame oxidizer are tabulated below. A correction factor was applied to PID readings based on available analytical data and corresponding PID data. This factor is updated each time new analytical data is available and may retroactively alter previously reported data.

Date Period Began	Date Period Ended	Days in Period	Influent Source	Time Flame Oxidizer Operated <sup>(d)</sup>	Flame Oxidizer Uptime <sup>(e)</sup>	Influent Concentration (PID)	Influent Concentration (Adjusted PID) <sup>(c)</sup>	Effluent Concentration (PID)	Effluent Concentration (Adjusted PID)	Calculated Destruction Efficiency <sup>(b)</sup>	Flowrate into Oxidizer (End of Period)	Estimated VOC Mass Removed <sup>(f)</sup>	Average Daily Removal Rate <sup>(c)</sup>	Estimated VOC Mass Released to Atmosphere <sup>(c)</sup>	Average VOC Mass Released to Atmosphere <sup>(c)</sup>

Notes:

% - percent	scfm - standard cubic feet per minute
hrs - hours	TPH - total petroleum hydrocarbons
JP-4 - jet petroleum fuel grade four	PID - photoionization detector
lbs - pounds	SVE - soil vapor compound
mg/m <sup>3</sup> - milligrams per cubic meter	VOC - volatile organic compound
ppmv - parts per million by volume	ACE - active containment extraction system

\* Concentration and associated calculated values may change after receipt of subsequent analytical data.

- (a) Discrepancies in runtime clocks for the flame oxidizer have been observed since restart. The system is being observed and diagnosed. The primary blower hours are currently used to calculate uptime.
- (b) Calculated destruction efficiencies are calculated using a single sampling event for each week, not using the average influent and effluent results.
- (c) Mass and volumes are calculated based on laboratory data for TPH reported as JP-4. As has been the basis for previous calculations at ST012, the average molecular weight of TPH as JP-4 is assumed equivalent to xylene (106.168 grams per mole). The assumed liquid density of the fuel is 6.57 lbs per gallon.
- (d) An error in hour recording caused an anomaly in hours that the flame oxidizer operated for the weeks ending 25 August and 2 September. The operation hours were estimated based on the flame oxidizer temperature chart recorder.
- (e) To address inconsistencies in influent PID and flow rate measurements, system piping was changed on 13 October 2016. Flow rate measurements prior to this date are reported in acfm, and after this date are reported in scfm.
- (f) The influent PID correction factor calculation has been revised to reflect a three-value rolling average (the average of the correction factor for the analytical sample collected one event prior, the current event, and one event after).

#### IV. GROUNDWATER ELEVATION MONITORING

Groundwater elevations monitored since the shutdown of the final extraction phase of SEE (29 April 2016). Starting with the week ending 07 October 2016, groundwater elevation monitoring will be performed monthly at all perimeter monitoring locations, except ST012-W11 and ST012-W37, which will be monitored weekly based on continued LNAPL recovery.

**CZ and UWBZ Groundwater Elevations**

### LSZ Groundwater Elevations

Note: Increased groundwater elevation in ST012-W11 on 19 August and 26 August 2016 are suspected to be influenced by LNAPL in the monitoring well caused by malfunctioning measuring equipment.

**V. SUBSURFACE TEMPERATURE MONITORING**

**A. Perimeter Monitoring Well Temperatures**

The next monitoring event will be completed during the week ending 28 April 2017.

- Notes:
1. Thermocouples are measured at approximate depths as follows (in feet below top of casing) : C01=162; C02=168; RB-3A=161; U11=180; U38=164; W24=230; W30=231; W36=225; W11=228; and W38=228.
  2. Existing permanent thermocouples were removed for maintenance on 30 September 2016. Readings after 30 September 2016 have been taken with a portable manually placed thermocouple.

**VI. SEE TEMPERATURE MONITORING POINTS**

This section will be updated periodically with new temperature monitoring point (TMP) data.

## VII. LNAPL MONITORING

### A. Perimeter LNAPL Thickness (ft)

Starting with the week ending 7 October 2016, groundwater elevation monitoring will be performed monthly at all perimeter monitoring locations, except ST012-W11 and ST012-W37, which will be monitored weekly based on continued LNAPL recovery.

**B. LNAPL Monitoring and Removal**

The table included with this report as Attachment 1 summarizes the removal and monitoring performed at LNAPL screened wells.

**VIII. WASTE GENERATION AND RECYCLING**

No site-derived waste or recyclable material was removed this week.

**IX. TWO WEEK LOOK AHEAD**

**A. SEE Decommissioning**

1. TerraTherm continues SEE decommissioning

**B. EBR Construction – None**

**C. Containment System Construction - None**

**D. Containment System Operation - None**

**E. Sampling/Monitoring Activities**

1. Pumping and bailing to remove NAPL from SEE wells
2. Continued NAPL screening in SEE extraction and injection wells

**F. SVE System Operation/Optimization**

1. Continue operation of thermal oxidizer and flame oxidizer with SVE system

**X. ATTACHMENTS**

1. LNAPL Screening Figures based on table in Attachment 2
2. LNAPL Monitoring and Removal Table

**Attachment 2. LNAPL Monitoring and Removal**

The following table summarizes the removal and monitoring performed at LNAPL screened wells. LNAPL monitoring of wells was prioritized based on expected future usage of each well as part of EBR. Subsequent LNAPL monitoring/removal frequency was prioritized based on the amount of LNAPL, the observed LNAPL recharge, and the temperature of each well. LNAPL monitoring and removal was initially conducted weekly at wells with LNAPL and the frequency has been reduced in some locations depending on whether LNAPL returns after pumping/bailing.

Dual screened wells (UWBZ28/LSZ51, UWBZ32/LSZ47, and UWBZ33/LSZ48, and CZ22/UWBZ35) are not routinely checked for LNAPL due to the packers installed between the two screen intervals and the associated air line and injection piping. Periodically, when collecting groundwater samples or doing maintenance work on the packers, LNAPL measurements have been collected. If LNAPL is observed while packers are temporarily removed, LNAPL is assumed to originate from the screened interval(s) that had positive dye test results in soil during well installation.

Any additional wells that are monitored in future weeks will be included on this table:

Well	Date	Able to Use Interface Probe?	NAPL Present (Y/N)	Before Pumping			Bailed/Pumped (Y/N)	NAPL Remaining (Y/N)	After Pumping			LNAPL Removed (Gallons)
				Depth to Product (ft. bgs)	Depth to Water (ft. bgs)	NAPL Thickness (ft.)			Depth to Product (ft. bgs)	Depth to Water (ft. bgs)	NAPL Thickness (ft.)

NM = Not measured due to temperature interference.

NR = Not recorded.

--- = No NAPL present. Measurement not performed.

\* = Newly installed well.

Notes:

(1) LNAPL estimated using PTFE bailer, not interface probe.

(2) Depth measured using a bailer.

(3) Depth measured using a tagline.

(4) LNAPL recovered included water.

(5) Dual screened well location monitored for LNAPL in the upper interval only.

(6) Dual screened well location monitored for LNAPL in the lower interval only.

(7) Dual screened well location was monitored after packer was pulled from well.

(8) Depth to water couldn't be determined via interface probe due to water temperatures exceeding probe limits at the depth recorded.

(9) Extraction well pump installed for active containment system. Regular monitoring and removal of LNAPL ceases at this well due to access issues.

(10) Actual LNAPL removal volume was not reported for this event. Volume removed is estimated to be the volume of LNAPL in the well casing at the time of removal (based on approximate thickness of LNAPL reported prior to LNAPL removal).
